Linkedin: <https://www.linkedin.com/in/nagendra-lankalapalli-6a7457236>

SUMMARY:

High-impact Java Developer with **3.5+ years** of experience delivering secure, scalable, and **high-performance** backend systems for **Banking, FinTech, SaaS**, and Enterprise platforms. Proven success in reducing **API latency by 40%**, **achieving 99.9%** uptime, and supporting platforms used by 100K+ users. Deep expertise in Java 17, **Spring Boot, Microservices, Kafka, secure payment integrations**, and **OAuth2/JWT**-based authentication. Strong Agile practitioner with full **SDLC** ownership.

TECHNICAL EXPOSURE:

- **Languages:** Java (8–17), J2EE, SQL
- **Frameworks:** Spring Boot, Spring Security, Spring Cloud, Hibernate
- **Databases:** MySQL, PostgreSQL, MongoDB, Redis
- **DevOps & Tools:** Docker, Maven, Git, GitHub, Postman, Swagger
- **Methodologies:** Agile / Scrum
- **Cloud & Servers:** AWS (EC2, RDS, S3 – Basic), Apache Tomcat, NGINX

PROFESSIONAL EXPERIENCE

Product Engineer - Intellect Design Arena

April 2025 – Present

- Developing and maintaining a high-volume transaction processing system for a major banking client, focusing on security, integrity, and efficiency.
- Building scalable and resilient financial services using Spring Boot and a microservices architecture.
- Collaborating with cross-functional teams in an Agile environment to design and deliver new features for the core banking platform.

Java Developer - Beauto Systems

July 2022 – March 2025

- Optimized backend services, reducing API response time by **40%** using caching (Redis).
- Designed scalable database solutions, increasing system uptime to **99.9%**.
- Integrated **payment gateways** (M-Pesa, Stripe, Paystack), improving transaction success rates.
- Enhanced security with **OAuth2.0, JWT**, reducing unauthorized access by **30%**.

- Implemented **Docker-based CI/CD pipelines**, cutting deployment time by **50%**.
- Developed API documentation with **Swagger**, increasing onboarding efficiency.

PROJECTS HANDLED:

#Project:1

- **Payment Service Hub (PSH)**
- **Duration:** April 2026 – Present
Role: Product Engineer
Technology Stack: Java 17, Spring Boot, Spring MVC, Spring Security, Angular, PostgreSQL, Kafka, ActiveMQ, WebSockets, APRON Framework
- **Project Overview**
- Payment Service Hub (PSH) is an enterprise-level **Banking and Financial Services (BFSI)** platform designed to handle **secure, scalable, and real-time payment transactions**. The system supports asynchronous communication, high-volume transaction processing, and modular service architecture to meet stringent banking compliance and performance requirements

#Project:2

- **Nexus of Agri (NoA) SaaS Platform**
Duration : October 2024 – April 2026
Role : Solution Architect & Lead Developer
Technology Stack : React, Spring Boot, PostgreSQL, Kafka, WebSockets, AI/ML, OAuth2.0, SSL/TLS, AWS
Description : Architected and developed a scalable SaaS platform for agricultural solutions, serving over 100,000 active users. The platform integrates AI-powered live translation to facilitate multi-lingual communication among users. Implemented real-time messaging using WebSockets and secured the platform with SSL/TLS and OAuth2.0 authentication. Optimized PostgreSQL with read replicas, reducing query latency by 35%, ensuring high availability and efficient database operations. Integrated payment gateways for seamless transactions.

#Project:3

- **IIOTCONN – Industrial IoT Platform**
Duration : Ongoing
Role : Backend Developer & Microservices Architect

Technology Stack : Java 17, Spring Boot, Spring Cloud, Kafka, Log4j2, PostgreSQL, Redis, Spring Security, Swagger 3

Description : Developed an Industrial IoT (IIoT) platform leveraging microservices architecture for real-time industrial product showcasing. Integrated Apache Kafka for real-time event-driven messaging, ensuring seamless data streaming between IoT devices and the cloud. Implemented Spring Security for authentication and authorization, ensuring data integrity and access control. Designed RESTful APIs with Swagger 3 documentation for improved API usability. Applied Log4j2 for comprehensive logging and monitoring, enhancing platform maintainability and debugging capabilities.

#Project:4

- **OnePlatform – Enterprise Management System**

Duration : Ongoing

Role : Java Backend Developer

Technology Stack : Spring Boot, React, Android, PostgreSQL, Keycloak (SSO), AWS, Docker

Description : Led the development of OnePlatform, a multi-functional enterprise system incorporating company website, HRM portal, and internal management tools. Designed and developed an Android application for mechanical employees to track timesheets and manage purchases. Integrated Single Sign-On (SSO) authentication using Keycloak to enhance security and user management. Implemented cloud-based meeting scheduling, job application management, and employee workflow automation. Deployed services using Docker for containerization and AWS for scalable infrastructure support.

EDUCATION:

- **B.Tech in Computer Science** from Kakinada Institute of Engineering Technology (KIET) – 2022.
- **Intermediate (MPC)**
Sri Ravi Junior College – 2018
- **Zpp High School G .vemavaram**
10th Class -2016

I hereby certify that all the information provided above is true to the best of my Knowledge.
